Invasive Group A Streptococcus (iGAS) infection
Someone close to you has an iGAS infection

If you show signs of the following in the next 30 days

Skin sores (school sores)
Sore throat
Fever (sweats)

Visit the health clinic and say you are an iGAS contact

The infection can be easily spread through contact

Kissing
Touching skin
Coughs and sneezes
Sharing clothes and towels
Sharing bedding

What can I do to STOP iGAS infections?

Wash hands with soap before eating
AND after coughing or sneezing

Treat all scabies (itchy skin) and skin sores
Wash bedding and clothing

Treat everyone in the house if anyone has scabies

Visit your doctor or health clinic if you or your family have skin sores, a sore throat, scabies (itchy skin) or fever
